PROFESSIONAL PROFILE

Software Engineer and BSc (Hons) Computer Science graduate with First Class Honours, experienced in designing, developing, deploying and maintaining full-stack software solutions for the Department of Agrarian Development. Skilled in React, TypeScript, Node.js, PHP, MySQL, REST APIs and containerized Linux environments. Independently developed and currently maintain the Department's DAD TV video-streaming platform, contributed to the development and ongoing expansion of FarmerNet and built a self-hosted AI platform using local large language models and retrieval-augmented generation. Experience spans the software development lifecycle, including application development, deployment, system maintenance and AI-enabled solution development.

EDUCATION

BSc (Hons) Computer Science – First Class Honours

Mar 2023 – Jul 2026

- University of Plymouth, UK - Delivered at NSBM Green University

G.C.E. Advanced Level – Physical Science

2020 – 2022

- Mahinda Rajapaksha College Homagama
-

WORK EXPERIENCE

Software Engineer – Contract

Apr 2026 – Present

Department of Agrarian Development – Colombo, Sri Lanka

- Design, develop and maintain software applications supporting the Department's operational and digital service requirements, while continuing to enhance existing departmental systems.
- Independently developed and currently maintain DAD TV, an internal broadcasting and media-management platform used by the Department.
- Maintain and expand the FarmerNet web platform, including ongoing development of its next version.

Software Engineer Intern

Oct 2025 – Apr 2026

Department of Agrarian Development – Colombo, Sri Lanka

- Contributed to the design and fully developed Version 1 modules of the FarmerNet Web Platform, including farmer registration and authentication, profile management, land registration, cultivation management, damage reporting, harvesting records and officer-side data management.
 - Conducted application and database testing and optimization while supporting deployment and server-administration activities involving Linux, Red Hat OpenShift, Docker, Podman, Nginx, SSH, Git and GitHub.
-

PROJECT EXPERIENCE

DAD TV Video Streaming Solution

May 2026 – Jul 2026

Department of Agrarian Development – Colombo, Sri Lanka

- Independently designed and developed a full-stack broadcast and media management platform currently used by the Department of Agrarian Development.
- Implemented video uploading, playlist and live-lineup preparation, continuous channel control, live viewing and multilingual news-ticker management in Sinhala, English, and Tamil.
- Integrated FFmpeg and FFprobe with adaptive HLS streaming, stream monitoring, automatic recovery, external live stream publishing, secure operational access and containerized Linux deployment.

Mail Management System

Nov 2025 - May 2026

Department of Agrarian Development – Colombo, Sri Lanka

- Contributed to the design and fully developed a document-routing and approval platform for creating, uploading, distributing, tracking and processing official correspondence across departments and Divisions.
- Implemented multi-level approval workflows, minute notes, document-status and finalization controls, organizational hierarchies, dynamic user roles, granular permission-based access control, and comprehensive audit trails.
- Developed PHP/MySQL application and database components, secure PDF handling, dashboards, search and filtering functionality, and containerized deployment using Docker and Podman.

AI Stack VM – Private Local RAG System

Jun 2026 - Jul 2026

Personal Project

- Independently architected, developed and deployed a self-hosted AI environment that runs local language models and provides retrieval-augmented generation over private engineering documents and source code repositories.
- Built OpenAI-compatible local-model and RAG services using llama.cpp, Qdrant, Python, FastAPI, React, TypeScript, Open WebUI and Podman.
- Implemented command-line installation and management tooling, authentication, rate limiting, environment profiles and deployment support for Linux virtual machines and OpenShift environments.

SKILLS

- **Programming Languages:** JavaScript, TypeScript, PHP, Python, SQL, Dart
- **Front-End and Mobile:** React, HTML, CSS, Flutter, React Native
- **Back-End Development:** Node.js, Express.js, FastAPI, PHP, REST APIs
- **Databases:** MySQL, SQLite, Firebase, Qdrant
- **AI & Machine Learning:** Retrieval-Augmented Generation (RAG), Local LLM Deployment, llama.cpp, Open WebUI, TensorFlow Lite
- **Authentication & Security:** Session-Based Authentication, Role-Based Access Control, Permission-Based Access Control, API Authentication, Rate Limiting
- **DevOps & Infrastructure:** Docker, Docker Compose, Podman, Red Hat OpenShift, OpenShift Virtualization, Virtual Machines (VMs), Linux, Nginx, SSH
- **Tools & Platforms:** Git, GitHub, phpMyAdmin
- **Core Concepts:** Full-Stack Development, CRUD Operations, REST APIs, Database Design, Server Administration, SDLC, System Testing

ACHIEVEMENTS & CERTIFICATIONS
